CERTIFIED ARBORIST

Professionals dedicated to preserving and protecting your growing investment.

Why do I need a Certified Arborist?

Certified Arborists are trained in the art and science of planting, caring for, and maintaining trees; they are specialists dedicated to excellence in the field of Arboriculture. They are highly qualified in the care of your valuable trees and shrubs with knowledge of the most up-to-date advances and proven age-old techniques.

What an Arborist can Provide

-  Diagnosis and treatment of your tree and shrub related problems.
-  Understanding tree biology.
-  Proper pruning and management techniques for your valuable trees and shrubs.
-  Identifying and selecting the appropriate trees and shrubs for your landscape.
-  Installation and establishment of trees and shrubs to enhance your landscape.
-  Understanding the delicate soil and water relationships which affect tree and shrub health.
-  Nutrition requirements and fertilization techniques to keep your trees and shrubs in peak form.
-  Recognizing certain tree hazards and construction damage.

To qualify as a Certified Arborist, an experienced tree care professional must pass an extensive examination developed by an international panel of experts in the industry and academia. The International Society of Arboriculture maintains this voluntary certification program.

Certified Arborists must maintain their certification every 3 years by taking continuing education credits or retaking the exam. The educational program does not stop with testing. A Certified Arborist must keep abreast of new technology, by attending seminars and reviewing the latest publications to obtain necessary continuing education credits.

It is very difficult, if not impossible, for the average person to recognize poor pruning work damaging to a tree's health. Your only assurance is the professional knowledge of an ISA Certified Arborist.

Be willing to pay market rates.

Proper tree work is not necessarily inexpensive. Reputable arborists are licensed, bonded, carry insurance, and maintain expensive, specialized equipment. Beware of exceptionally low estimates, which may have hidden costs or indicate an arborist lacking professional credentials.
